

SBehavEd compiler documentation

Nils Laurent, 2A Apprentice at Ensimag

May 31, 2018

1 Files

Use two files :

`<file_name>.txt` containing BehavEd code

`<file_name>.sb` containing SBehavEd code

CAUTION : `file_name` must be identical for the `.txt` and `.sb` files. This is how the compiler associate the BehavEd file to the SBehavEd file.

2 Compile

2.1 On Windows

```
python.exe SBehavEdC.py <source_file_name>.sb [<output_file>]
```

If `<output_file>` is not given, the output will be `<source_file_name>.sb.out.txt`

3 IBIze

The compilation of the `<output_file>` BehavEd script is automated using the IBIze program.
Set the path to IBIze in `SBehavedC.ini`
